The RIOS Client Application and License

Control Software for the RIOS Interoperability Server

The RIOS Client Software Application provides intuitive multi-site control of the SyTech RIOS Interoperability Server and RIOS Wide-Area Network. RIOS Client allows the user to patch, monitor, dispatch, record, playback and control dissimilar voice and video assets interfaced to the local RIOS and authorized assets within the RIOS Wide-Area Network. RIOS Servers allows for hundreds of RIOS Clients to connect via LAN or EVDO connections effectively allowing managers, state officials, and emergency-response personnel to access all types of communications including conventional and trunked radio systems. PDAs running the RIOS Lite Application can log in to the system for wireless voice, video and data functionality .
