

ADACS

Intelligence Collection & Analysis Solutions

The Scalable ADACS4 Intercept Platform

SyTech's ADACS4 allows law enforcement agencies to intercept, record, playback and archive voice and data transmissions from land line, cellular, push-to-talk, VoIP, fax, social media and internet sources passing through compliant service provider switches.

Scalable in nature, SyTech offers ADACS solutions ranging from single user, software-only applications to nationwide, multiuser networks. Select from Title III modules for voice and IP intercept, real-time pen data collection, toll imports for historical analysis and other powerful surveillance options.

AUDIO:

Monitor & record live audio from land lines, cell phones, VoIP, PTT devices & internet protocol sources.

IP:

Collect and analyze IP traffic originating from mobile & fixed site locations.

DATA:

Monitor real-time pen data & location mapping information.

LOCATION:

Pinpoint GPS location with interactive mapping, geofencing & location alerts.

ANALYSIS:

Reveal trends, identify connections & predict events with customized reports and charts.

VIDEO:

Integrate surveillance video with all-in-one electronic evidence case management.

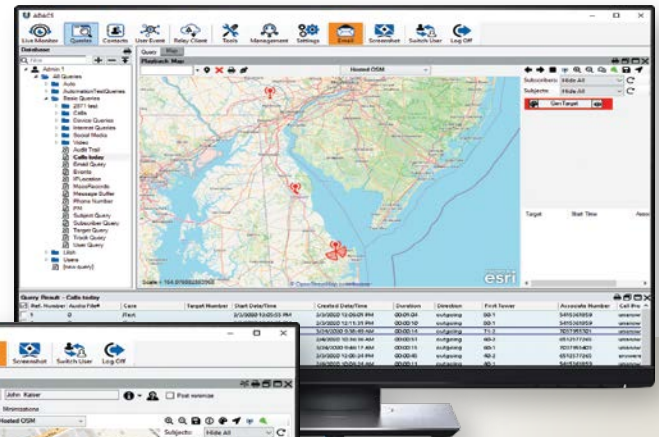

ADACS
